FEMA will make available to the public, later this year, a new publication on how to build an in-residence shelter, also known as a “safe room,” to protect against the devastating effects of high winds from tornadoes and hurricanes. This new publication, FEMA 320, *Taking Shelter From the StormL Building a Safe Room in Your Home*, is scheduled to be available in late October 1998. The publication will be available from FEMA Publications Distribution Center and through the FEMA Web site at www.fema.gov.
